What is CALQUENCE?
CALQUENCE is a prescription medicine used to treat adults with mantle cell lymphoma (MCL) who have received at least one prior treatment for their cancer.

It is not known if CALQUENCE is safe and effective in children.

Important Safety Information About CALQUENCE

CALQUENCE may cause serious side effects, including:

✦ Bleeding problems (hemorrhage) may happen during treatment with CALQUENCE, and can be serious. Your risk of bleeding may increase if you are also taking a blood thinner medicine. Tell your healthcare provider if you have any signs or symptoms of bleeding, including: blood in your stools or black stools (looks like tar), pink or brown urine, unexpected bleeding, or bleeding that is severe or you cannot control, vomit blood or vomit that looks like coffee grounds, cough up blood or blood clots, dizziness, weakness, confusion, change in your speech, or headache that lasts a long time.

Please see Important Safety Information on pages 6-7 and full Prescribing Information, including the Patient Information, at www.CalquencePI.com.
Your doctor has prescribed you CALQUENCE because you need a new treatment, and now you’re probably wondering what to expect. This guide will help you manage this next step in your treatment plan.

As you know, being informed, taking your medications as prescribed, and having the right support tools and programs are important parts of your treatment regimen.

So, let’s start this next phase of your journey with some useful information.

What should I tell my healthcare provider before taking CALQUENCE?

Before taking CALQUENCE, tell your healthcare provider about all of your medical conditions, including if you:

- have had recent surgery or plan to have surgery. Your healthcare provider may stop CALQUENCE for any planned medical, surgical, or dental procedure
- have bleeding problems
- have or had heart rhythm problems
- have an infection
- have or had hepatitis B virus (HBV) infection
- are pregnant or plan to become pregnant. CALQUENCE may harm your unborn baby
- are breastfeeding or plan to breastfeed. It is not known if CALQUENCE passes into your breast milk. Do not breastfeed during treatment with CALQUENCE and for 2 weeks after your final dose of CALQUENCE

Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements. Taking CALQUENCE with certain other medications may affect how CALQUENCE works and can cause side effects. Especially tell your healthcare provider if you take a blood thinner medicine.
STAY ON TRACK WITH YOUR Treatment Schedule

It's important to take CALQUENCE exactly as your doctor has prescribed.

How You Should Take CALQUENCE

Take CALQUENCE twice a day, about every 12 hours. It's important to take your doses as directed so you always have the proper amount of medicine in your body to help manage your MCL.

You can take CALQUENCE with or without food. Swallow CALQUENCE whole with a glass of water.

You have the best chance of benefiting from treatment if you take your medication consistently. Missing doses can negatively impact your treatment goals.

Important Safety Information About CALQUENCE

CALQUENCE may cause serious side effects including:

- **Infections.** Infections can happen during treatment with CALQUENCE. These infections can be serious and may lead to death. Tell your healthcare provider right away if you have fever, chills, or flu-like symptoms.

- **Decrease in blood cell counts.** Decreased blood counts (white blood cells, platelets, and red blood cells) are common with CALQUENCE, but can also be severe. Your healthcare provider should do monthly blood tests to check your blood counts.

Please see Important Safety Information on pages 6-7 and full Prescribing Information, including the Patient Information, at www.CalquencePI.com.

- If you miss a dose of CALQUENCE, take it as soon as you remember. If it is more than 3 hours past your usual dosing time, skip the missed dose and take your next dose of CALQUENCE at your regularly scheduled time. Do not take an extra dose to make up for a missed dose.

- Do not change your dose or stop taking CALQUENCE unless your healthcare provider tells you to.

- Your healthcare provider may tell you to decrease your dose, temporarily stop, or completely stop taking CALQUENCE if you develop certain side effects.

- Swallow CALQUENCE capsules whole with a glass of water. Do not open, break, or chew capsules.

- If you need to take an antacid medicine, take it either 2 hours before or 2 hours after you take CALQUENCE.

- If you need to take certain other medicines called acid reducers (H2-receptor blockers), take CALQUENCE 2 hours before the acid reducer medicine.

Lighthouse is here to help support you as you manage your life with MCL.

When you join the Lighthouse program, you’ll have a medically trained advocate who can address any questions you or your caregiver might have 24/7, offer tips that can help you stay on track with your medication schedule, and more.

To enroll, simply fill out the sign-up card in your starter kit, visit HemeLighthouseProgram.com or call 1-855-LHOUSE1 (1-855-546-8731).
What to Expect When Taking CALQUENCE

CALQUENCE can cause side effects and you need to be aware of what those side effects could be.

✦ The most common side effects of CALQUENCE include: headache, diarrhea, tiredness, muscle aches, and bruising

✦ Serious side effects, including bleeding problems, infections, decreases in blood cell counts, second primary cancers, and heart rhythm problems, can occur (additional serious side effects are listed at right)

Tell your doctor about any side effects you experience while taking CALQUENCE.

Important Safety Information About CALQUENCE

CALQUENCE may cause serious side effects, including:

✦ Bleeding problems (hemorrhage) may happen during treatment with CALQUENCE, and can be serious. Your risk of bleeding may increase if you are also taking a blood thinner medicine. Tell your healthcare provider if you have any signs or symptoms of bleeding, including:
  - blood in your stools or black stools (looks like tar)
  - pink or brown urine
  - unexpected bleeding, or bleeding that is severe or you cannot control
  - vomit blood or vomit that looks like coffee grounds
  - cough up blood or blood clots
  - dizziness
  - weakness
  - confusion
  - change in your speech
  - headache that lasts a long time

✦ Infections. Infections can happen during treatment with CALQUENCE. These infections can be serious and may lead to death. Tell your healthcare provider right away if you have fever, chills, or flu-like symptoms.

✦ Decrease in blood cell counts. Decreased blood counts (white blood cells, platelets, and red blood cells) are common with CALQUENCE but can also be severe. Your healthcare provider should do monthly blood tests to check your blood counts.

✦ Second primary cancers. New cancers have happened in people during treatment with CALQUENCE, including cancers of the skin. Use sun protection when you are outside in sunlight.

✦ Heart rhythm problems (atrial fibrillation and atrial flutter) have happened in people treated with CALQUENCE. Tell your healthcare provider if you have any of the following signs or symptoms:
  - your heartbeat is fast or irregular
  - feel lightheaded or dizzy
  - pass out (faint)

  - shortness of breath
  - chest discomfort

These are not all the possible side effects of CALQUENCE. Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088.
How will I know if CALQUENCE is working for me?
You will continue to have periodic check-ups with your doctor; your doctor will run some tests to see if CALQUENCE is working for you. It is important to keep all your appointments with your doctor so you can monitor your treatment progress. Also be sure to continue taking your medicine as directed, unless your healthcare team tells you otherwise.

What can I do if I have difficulty remembering to take my pills?
The Patient Starter Kit was created to give you the medication reminder tools and resources you need to keep your treatment journey on track! Use the medication reminder tools, and remember to talk to your doctor about any concerns with your dosing.

Is there financial support available to me?
AstraZeneca Access 360TM provides information on financial assistance, and helps you navigate insurance coverage.

✦ AstraZeneca Access 360 provides you with coverage support, and connects you with affordability programs.
Visit www.myaccess360.com or call AstraZeneca Access 360 Mon-Fri, 8 AM – 8 PM ET at 1-844-ASK-A360 (1-844-275-2360) to speak to one of the Patient Access Specialists, who are ready to help you.

How well might CALQUENCE work for me?
Everyone’s body is different and CALQUENCE may work better for some people than others. In a clinical study of 124 patients, 8 out of 10 patients responded to CALQUENCE. While CALQUENCE will not cure your cancer, it may be able to help manage it.

Important Safety Information About CALQUENCE
CALQUENCE may cause serious side effects, including:
✦ Second primary cancers. New cancers have happened in people during treatment with CALQUENCE, including cancers of the skin. Use sun protection when you are outside in sunlight.
✦ Heart rhythm problems (atrial fibrillation and atrial flutter) have happened in people treated with CALQUENCE. Tell your healthcare provider if you have any of the following signs or symptoms:
- your heartbeat is fast or irregular
- feel lightheaded or dizzy
- pass out (faint)
- shortness of breath
- chest discomfort

Tools and Tips for Taking CALQUENCE® (acalabrutinib)

Additional Resources for the Road Ahead
These organizations are dedicated to helping people with MCL with valuable programs and resources.
✦ American Cancer Society
www.cancer.org
The American Cancer Society offers programs, support, and information. Learn about treatment options, get advice on coping with side effects, get answers to questions about health insurance, free services, and much more.
✦ Leukemia and Lymphoma Society
www.lls.org
LLS is a source of free, highly specialized blood cancer information, education and support for patients, survivors, families and healthcare professionals. They have chapters across the U.S. and Canada.
✦ Lymphoma News Today
www.lymphomanewstoday.com
Lymphoma News Today is a news and information website about the disease. You can subscribe to their free email newsletter. (LNT does not provide medical advice, diagnosis, or treatment.)
✦ Lymphoma Research Foundation
www.lymphoma.org
The nation’s largest non-profit organization devoted exclusively to funding innovative lymphoma research and providing support and services to people with lymphoma, their families, and caregivers.
✦ National Comprehensive Cancer Network
www.nccn.org/patients/guidelines/nhl-mantle/index.html#
The NCCN publishes a very comprehensive guide for treatment of MCL. It contains important information for patients, caregivers, family, and friends. You can view the booklet or download it at the link above.

The following tools are included in the starter kit:
- Sticker reminder
- Bottle cap alert
- Calendar
- Pill box

Each of these are included to help make it easier to remember to take CALQUENCE twice a day—about every 12 hours—one capsule in the morning and one capsule at night.

If you choose not to use the tools, here are some tips that can keep you on track with taking CALQUENCE:
✦ Put CALQUENCE where you are most likely to remember it
✦ Consider putting your morning dose in the kitchen, and your evening dose by your bed
✦ Turn your bottle of CALQUENCE over in the morning once you’ve taken it and then right-side up in the evening
✦ Put reminders in your phone to alert you

Store CALQUENCE at room temperature between 68°F to 77°F (20°C to 25°C).

Important Safety Information About CALQUENCE
The most common side effects of CALQUENCE include: headache, diarrhea, tiredness, muscle aches, and bruising.

NOTES
Please use these next pages to write down any questions you may have for your doctor.
**What should I tell my healthcare provider before taking CALQUENCE?**

**Before taking CALQUENCE, tell your healthcare provider about all of your medical conditions, including if you:**
- have had recent surgery or plan to have surgery. Your healthcare provider may stop CALQUENCE for any planned medical, surgical, or dental procedure.
- have bleeding problems.
- have or had heart rhythm problems.
- have an infection.
- have or had hepatitis B virus (HBV) infection.
- are pregnant or plan to become pregnant. CALQUENCE may harm your unborn baby.
- are breastfeeding or plan to breastfeed. It is not known if CALQUENCE passes into your breast milk. Do not breastfeed during treatment with CALQUENCE and for 2 weeks after your final dose of CALQUENCE.

**Tell your healthcare provider about all the medicines you take,** including prescription and over-the-counter medicines, vitamins, and herbal supplements. Taking CALQUENCE with certain other medications may affect how CALQUENCE works and can cause side effects. Especially tell your healthcare provider if you take a blood thinner medicine.

**How should I take CALQUENCE?**
- Take CALQUENCE exactly as your healthcare provider tells you to take it.
- Do not change your dose or stop taking CALQUENCE unless your healthcare provider tells you to.
- Your healthcare provider may tell you to decrease your dose, temporarily stop, or completely stop taking CALQUENCE if you develop certain side effects.
- Take CALQUENCE 2 times a day (about 12 hours apart).
- Take CALQUENCE with or without food.
- Swallow CALQUENCE capsules whole with a glass of water. Do not open, break, or chew capsules.
- If you need to take an antacid medicine, take it either 2 hours before or 2 hours after you take CALQUENCE.
- If you need to take certain other medicines called acid reducers (H2-receptor blockers), take CALQUENCE 2 hours before the acid reducer medicine.
- If you miss a dose of CALQUENCE, take it as soon as you remember. If it is more than 3 hours past your usual dosing time, skip the missed dose and take your next dose of CALQUENCE at your regularly scheduled time. Do not take an extra dose to make up for a missed dose.

**Please see accompanying full Prescribing Information, including the Patient Information, at www.CalquencePI.com.**

**What are the possible side effects of CALQUENCE?**

CALQUENCE may cause serious side effects, including:
- **Bleeding problems (hemorrhage)** may happen during treatment with CALQUENCE, and can be serious. Your risk of bleeding may increase if you are also taking a blood thinner medicine. Tell your healthcare provider if you have any signs or symptoms of bleeding, including:
  - blood in your stools or black stools (looks like tar)
  - pink or brown urine
  - unexpected bleeding, or bleeding that is severe or you cannot control
  - vomit blood or vomit that looks like coffee grounds
- **Infections** can happen during treatment with CALQUENCE. These infections can be serious and may lead to death. Tell your healthcare provider right away if you have fever, chills, or flu-like symptoms.
- **Decrease in blood cell counts.** Decreased blood counts (white blood cells, platelets, and red blood cells) are common with CALQUENCE, but can also be severe. Your healthcare provider should do monthly blood tests to check your blood counts.
- **Second primary cancers.** New cancers have happened in people during treatment with CALQUENCE, including cancers of the skin. Use sun protection when you are outside in sunlight.
- **Heart rhythm problems (atrial fibrillation and atrial flutter)** have happened in people treated with CALQUENCE. Tell your healthcare provider if you have any of the following signs or symptoms:
  - your heartbeat is fast or irregular
  - feel lightheaded or dizzy
  - cough up blood or blood clots
  - pass out (faint)
  - shortness of breath
  - chest discomfort

The most common side effects of CALQUENCE include: headache, diarrhea, tiredness, muscle aches, and bruising. These are not all the possible side effects of CALQUENCE. Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088.

**How should I store CALQUENCE?**
- Store CALQUENCE at room temperature between 68°F to 77°F (20°C to 25°C).

**Keep CALQUENCE and all medicines out of the reach of children.**

**General information about the safe and effective use of CALQUENCE.**

Medicines are sometimes prescribed for purposes other than those listed in a Patient Information leaflet. Do not use CALQUENCE for a condition for which it was not prescribed. Do not give CALQUENCE to other people, even if they have the same symptoms you have. It may harm them. You can ask your healthcare provider or pharmacist for more information about CALQUENCE that is written for health professionals.

**What are the ingredients in CALQUENCE?**

**Active ingredient:** acalabrutinib

**Inactive ingredients:** silicified microcrystalline cellulose, pregelatinized starch, magnesium stearate, and sodium starch glycolate.

**Capsule shell contains:** gelatin, titanium dioxide, yellow iron oxide, FD&C Blue 2, and black ink.
We Are Committed to Supporting You on This Journey

CALQUENCECares™ is a program created to provide you with education and support throughout your treatment journey.

Through CALQUENCECares, you will receive:

✦ Information about treatment with CALQUENCE
✦ Regular e-mails or mailings with helpful information

Should questions come up about CALQUENCE, you may call 1-800-236-9933 or visit CALQUENCECares.com. Remember, your healthcare provider is your first source of care and information. He or she should always be contacted for medical advice and treatment.

Remember that you have many resources available as you continue your journey. Don’t be afraid to ask for help, and rely on the kindness of friends and family who offer you support.
